Subject: [bug report] EditField::StdBar Undo menu not checked and
EditField::RightDown is reentrant

1.I think Undo menu should be disabled when EditField is readonly.

menu.Add(t_("Undo"), THISBACK(Undo))
  .Key(K_ALT_BACKSPACE)
  .Key(K_CTRL_Z);

So I change it to

menu.Add(IsEditable(),t_("Undo"), THISBACK(Undo))
  .Key(K_ALT_BACKSPACE)
  .Key(K_CTRL_Z);

2.When I repeat right click EditField,the EditField::RightDown method is reentrant.The stack likes
the following:

When I close the parent window,it may crash at the next code line.(It's easy to reproduce it in my
project)

In the Upp's help document,"About modal loops and periodic timer events" has talked about this.I
think EditField::RightDown should be protected.
