koldo wrote on Fri, 14 September 2012 02:54Hello Mirek

I think in Windows, LocalProcess does not get stdout. I have tried this:

```
String out = Sys("gcc -c mybadprogram.c");
```

out is empty. However doing this in the command line:

Took me a while to figure this out...

The problem is that gcc returns non-zero exit code, which makes Sys return void. See documentation...
