Hi Mirek,

I just updated umk after a while and find out that it started to behave weirdly after removing the Web package. The compilation always fails, even though there are no errors from compiler:

```
$ /tmp/umk wd ide GCCMK -br +SSE2,GUI,SHARED /tmp/umk----- ide/Common ( SSE2 GUI
SHARED GCC BLITZ LINUX POSIX ) (1 / 35)
BLITZ: ComDlg.cpp Module.cpp Util.cpp
----- ide/Core ( SSE2 GUI SHARED GCC BLITZ LINUX POSIX ) (2 / 35)
BLITZ: Core.cpp Package.cpp Workspace.cpp usc.cpp Host.cpp
Hdepend.cpp
----- ide/LayDes ( SSE2 GUI SHARED GCC BLITZ LINUX POSIX ) (3 / 35)
BLITZ: sdiff.cpp laylib.cpp layusc.cpp property.cpp textprop.cpp fontprop.cpp propane.cpp
item.cpp visgen.cpp laydes.cpp layfile.cpp laywin.cpp
layout.cpp
In file included from /home/h/.upp/wd_out/ide/LayDes/GCCMK.Blitz.Gui.Shared.Sse2/$
blitz.cpp:62:0:
```

```
ide/Common: 3 file(s) built in (0:00.80), 268 msec / file, duration = 3259 msec, parallelization
100%
ide/Core: 6 file(s) built in (0:01.82), 304 msec / file, duration = 4081 msec, parallelization 100%
ide/LayDes: 13 file(s) built in (0:05.14), 395 msec / file, duration = 7896 msec, parallelization
67%
```

There were errors. (0:07.89)

Version 5310 is AFAIK last that works well, 5318 is already broken. Could you have a look at it please?

Thanks,
Honza
