Hello nneilson

Thanks for that part about DE-compilation though my fascination is not that but 'tampering' of the Static Binary's textual data. There are too many tales about changing strings in binaries so that is why.

@KOLDO, Thank you! Do your "naked" executables take up more than 10 Mega-bytes??? 'Qt' had my hopes up until I personally "Did The Math" to determine that in order to deploy 'Qt' as a deliverable, it would not be less than 10 Mega-bytes... Too bad for 'Qt'... I switched to Boost/Standard C++/ICU instead for all but the GUI; after wasting time on the GUI OR WHATEVER.

10 Mega-bytes is my 'absolute', hard file size top-- by the way for the "naked" executable -- combined and all DLLs that must be deployed. Why? It is a business decision.
