klugier wrote on Wed, 26 September 2012 08:21Hello,

I found a bug in all u++ applications, I have compiled on my GNU/Linux (Kubuntu 12.04 amd64). The problem is with all "fullscreen" application. When I moved my window to the additional display and I would like to make this window stretched to all screen surface. I can not do this. The window is marked as a resize to maximum but it not fit to screen surface.

I enclose picture with this error.

Sincerely,

Unable to reproduce. I have noticed some minor problems with multimonitor setup in Linux (namely initial theide splash-screen is centered across both windows), but maximize seems to work OK.

Tested with Linux Mint Mate 12 and Intel graphics.
