
Subject: using namespace Upp; causes errors

Hi!

Actually I only want to create labeled buttons with a custom background color. The only way to this seems to be chameleon, though I do not know whether this is something I have to install or just the example files that can be found here:

[http://ultimatepp.org/redmine/projects/upp/repository/show/t ags/n-2011-15/reference/Chameleon](http://ultimatepp.org/redmine/projects/upp/repository/show/t%20ags/n-2011-15/reference/Chameleon)

I downloaded and tried to compile, getting a load of errors. The first few being:

```
C:\eigene dateien\c-gefriekel\chameleon\main.cpp:3: error: expected namespace-name before ';' token
```

```
C:\eigene dateien\c-gefriekel\chameleon\main.cpp:3: error: `' is not a namespace
```

Also the simple helloworld project yields the same:

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
GUI_APP_MAIN {  
    PromptOK("Hello world");  
}
```

Am I missing something here? Where is this Upp namespace supposed to be defined? (I ran a windows search for files containing "namespace Upp" in the uppsrc folder and found nothing)(I am using windows, by the way).

Thanks in advance!

Greetings,
Mirko
