Hello,

to convert from String to Double, override the function Scan.

for example:

```
struct ConvDouble : Convert
{
    Value Format(const String &q) const
    {
        return q.IsNull ? Null : UPP::Format("%.2d", q);
    }

    Value Scan(const Value& text) const
    {
        String s = text;    //
        return ScanDouble(s); // Not tested.
    }
};
```

omari.
