Thanks Mirek but looking at the docs for CtrlCore, CtrlLib, MenuBar, Bar, EditField derived classes, etc and trying about 20 examples I did not find out how to put an edit field in the menu.

Widget placement, size, etc. yes.

No direct code or info on editfield in menu.

About 8 hours looking.

Could you point me to an example or give a few lines of code on how it can be done.
