nlneilson wrote on Tue, 30 October 2012 09:11 All my u++ apps worked on Ubuntu 12.04 64bit until a click-able update.

I did see some wine stuff scrolling by.

I removed and installed wine.

Still the same problem, running from a .bash gets this:

Quote:p11-kit: couldn't load module: /usr/lib/i386-linux-gnu/pkcs11/gnome-keyring-pkcs11.so:
/usr/lib/i386-linux-gnu/pkcs11/gnome-keyring-pkcs11.so: cannot open shared object file:

No such file or directory

Missing font Times New Roman

Here is a small u++ app but the error is the same for all.

<http://www.nlneilson.com/wwposts/DGPSmerge.exe>

The apps still work on 12.04 32bit and Win 32 and 64 bit.

They were built on Win with the MS compilers.

Obviously for some reason, you are now missing Time New Roman font... (or it is not available for wine). It has little to do with U++...
