Subject: Re: Frameless(true); bug, my error or ???
Posted by nlneilson on Mon, 12 Nov 2012 00:12:19 GMT

In 2010 I tinkered with FrameLess and did not have the clipping problem.
  http://www.ultimatepp.org/forum/index.php?t=msg&goto=249
19&&srch=FrameLess#msg_24919

There were two problems then. On the task bar it didn't work correctly which seems OK now.
It was not drag able with out the top.
I will just have something like Ctrl+M+arrow keys.
For different computers the location is slightly different.
Clicking a Save>Exit option and:
  leftP = GetRect().left;
  topP = GetRect().top;
  String LeftP = Format("%.0f", leftP);
  String TopP = Format("%.0f", topP);
the location is saved to a .cfg file (along with a dozen other parameters) and only needs to be
done once on each computer.

So now it is just a problem with the clipping.

On another computer the right is clipped so much it creates another menu bar and the bottom 2
EditField lines are gone.

It should be like this without the top bar:
