
Subject: To get xml errors from LoadFromXML

Hello all

Now it is not possible to get errors in XML strings detected by LoadFromXML() because they are caught inside and removed.

I would vote to remove the try-catch from LoadFromXML() and let the programmer to handle the error properly.

```
bool LoadFromXML(Callback1<XmlIO> xmelize, const String& xml)
{
    try {
        XmlNode node = ParseXML(xml);
        if(node.GetCount() == 0)
            return false;
        for(int i = 0; i < node.GetCount(); i++)
            if(node.Node(i).IsTag()) {
                Value dummy;
                xmelize(XmlIO(node.At(i), true, dummy));
                break;
            }
        return true;
    }
    catch(XmlError) {} // XmlError is removed
    return false;
}
```
