First!

I'm sorry my English is poor.

I have a problem with RightDown(and similar Leftdown).

This is the class definition:

```
class Gun : public WithGunLayout<TopWindow>
{
.....;
Withkep_lay <ParentCtrl> mj;
.....;
}
```

I use this layoutfile in a TabCtrl:

```
Gun::Gun()
{
.....
CtrlLayout(mj);
suma_vievver.Add(mj,"Image");//suma_vievver is a TabCtrl in the Gun.lay.
.....
}
```

Should I put a picture of mj.

Right click choose the interesting part but right click does not work. This is logical RightDown of mj
overdefine/overwrite Gun::RightDown. How to do call the right click function of mj?.

Thank you for help.
