Subject: Frustration when not using U++

I don't know if this happens to anyone else.

But when I'm forced to use other technologies I get frustrated with their bad design. Sometimes I wish it was U++.

Even WELL DESIGNED libraries are bad compared to U++;

See for example this:

Qt:

```
QString name = ui->lineEdit->text();
QString phone = ui->lineEdit_2->text();

int c = ui->tableWidget->rowCount();

ui->tableWidget->insertRow(c);

ui->tableWidget->setItem(c, 0, new QTableWidgetItem(name));
ui->tableWidget->setItem(c, 1, new QTableWidgetItem(phone));
```

compared to this

U++

```
array.Add(~edit1, ~edit2);
```

There must be a shorter way for the Qt version. But the shorter way of U++ was immediately clear for me without digging up docs.

Sometimes I wonder why the industry is so focused on C#. U++ makes C++ enjoyable.
