---

I'm writing some web downloading utility which handles partial downloading of disk images from Web through Http. And it looks like the size of downloaded data may easily overcome `INT_MAX` (which is 2GB). I guess others may meet this problem too in the future.

So I propose changing `HttpRequest::max_content_size` from `int` to `int64` (also changing `HttpRequest::MaxContentSize()` argument to `int64`) to be able to handle bigger data chunks.
