Hello crydev

If MovieInfo has operator< it is easy, just call Sort(myvector);

If not, you can do this:

```
struct MySortWay {  
    bool operator () (const MovieInfo& a, MovieInfo& b) const {  
        return a.value < b.value; // Just an example. It depends on MovieInfo contents  
    }  
};
```

```
Vector <MovieInfo> myvector;
```

```
Sort(myvector, MySortWay);
```
