Subject: Re: WIN32 API "MoveFile" and LineEdit Ctrl issue
Posted by navi on Mon, 19 Nov 2012 07:44:27 GMT

Hello Andrei,

Thanks for your reply. but I don't think "MoveFile" API has any issue renaming file with same name or with a different name in that matter. See the Test-1 success even when file is rename with same name. Yet on the Test-2 when the file names are fetched from the LineEdit Ctrl "MoveFile" complains invalid filename regardless if the name is same or different. Once you fetch text from LineEdit those text are not valid filename! My guess it might have hidden backslash "n" at the end or the CHARSET gets changed.

Thanks
Navi
