When I counter that with:

```
#ifdef __DEBUG  
    DDUMP(rows);  
#endif
```

It compiles but I get a link error:

LINK : fatal error LNK1181: cannot open input file 'opt\libmysql.lib'

The C:\Program Files\MySQL\MySQL Server 5.5\lib directory only has a debug subfolder, no opt.

after copying the debug folder to an opt folder it goes.

I copied libmysql.lib to the debug folder before. Not pretty, but does the trick.
