koldo wrote on Wed, 14 November 2012 04:07Hello all

It would be great if EditField classes (EditString, EditDouble, ...) and other U++ widgets would have serialize/xmlize/jsonize functions as GridCtrl.

These could just store the value.

Why not, but you need IDs for children.

Maybe we could use Ctrl::GetLayoutId() here? Maybe we should add rename/synonyme Ctrl::GetId() then...
