Hi All

I would like to ask you, if you have any experience on running Ultimate++ IDE under FreeBSD (5.x branch).

I didn't found this project in ports tree. That's why I tried to build 511 version from sources on my own, but my make command finished with plenty of errors (The only changes I made to Makefile was editing path variables and changing Linux compilation flag to FreeBSD flag).

Googling around wasn't successful.

Thank you for any opinion
