Subject: Re: List of custom controls, how?

Hi, I wrote the custom control solution as Honza suggested me and it works for me. However, there still is one peculiarity here. The behaviour when drawn is as following:

The situation that the controls are in now is as following. I have an image, a title and another description text under the title. All three should be visible. However, the description text is not visible by default. When I resize the control by dragging the bar to the right, the text becomes visible. The following picture cleares it up a bit.

When I drag the bar back to the left, the description becomes hidden again. It seems like an element is interfering with the description label, but I don't know which and I also cannot find out

What could be the problem in this situation? I am planning on creating custom controls for other purposes this way, because I am happy the way it behaves, but I think I will run into this problem again. It would be nice if I could solve it here
