This sounds like you got the positioning/sizing code slightly wrong. If you use layout file, check the "springs" that the label is correctly anchored. You want it to be fixed on all sides, so when resizing it keeps same distance from edges of   layout:img]index.php?t=getfile&id=3937&private=0[/im g]

If you position the label in code, it should be done with something like this:
myLabel.HSizePosZ(leftMargin, rightMargin).VSizePosZ(topMargin, bottomMargin);

If needed, you can post the relevant part of you code and I can perhaps give you more precise advice

Honza

Thanks for you response Honza, I fixed the problem. The problem was as following:

Add(mImg.LeftPosZ(5, 30).TopPosZ(10, 30));
Add(mTitle.LeftPosZ(40, 300).TopPosZ(5, 30));
                // I thought that 300 was the width of the control, because I used that value in the two above.
                // However, As in your post, it is not the width, but the margin from the right side.
Add(mInfo.HSizePosZ(40, 300).VSizePosZ(30, 5)); // changed 300 to 10

It works now, stupid mistake of mine though. Thanks for your help!
