Quote: Don't you love it how the U++ interface is uniform across all the widgets?  
absolutely love u++ uniform interface across the widgets!! as well as everything else about it. I am addicted to U++. But you are awesome too. How do you know these things? isn't scrollbar still an undocumented class?

also as per your code I have modified my version of LineEditExtended to the followings. works like a charm. I am also planning to make some further modification to LineEdit to make it more like NotePad++. like adding Find And Replace, Block Selection, Syntax Highlight etc. I found my starting point here at this thread: [Advanced Line Edit proposal - part I](#)

```
class LineEditExtended : public LineEdit{
public:
    virtual void NewScrollPos(){
        WhenScrollChange();
    }

    void NoScrollbar(){
        sb.NoAutoHide();
        sb.Hide();
    }

    void NoVertScrollbar(){
        sb.y.NoAutoHide();
        sb.y.Hide();
    }

    Callback WhenScrollChange;
};
```

I have already managed to teach it (LineEditExtended) to sort filenames and filetype for me! no credit to me, but HUGE thanks to U++ and its awesomeness.

regards  
Navi
