Thanks navi

I tried the code and just get a pop up that says:
Assertion failed in C:\upp\uppsrc\CtrlCore\Ctrl.cpp, line 573
Gui widgets cannot be global variables

This is with both line 18 and 19 with each commemted one at a time.

Passing a String FROM H2.h will be fine into something like you suggested.
// void Set_t1(String a) {t1<<=a;}

edit: After Clean UPPOUT, CLEAN and rebuild it works with MSC9 optimal. Debug throws the error.
Same with MSC10, optimal OK and debug error

Much Thanks! That gives me something to work with.
