brianE wrote on Tue, 27 June 2006 22:25OK, I have gone through the tutorial and it is so much clearer now. I guess the Layout is just that - a place to lay out the form and its widgets. The contents belongs in the Constructor. The examples and demos make more sense and I can see a way forward. However, I suspect I will be back with more questions!

BrianE

Do not worry, I am here to answer your question... at least the easiest, . For the difficult one we ask help together to other very clever U++ guru that populate this forum.  
Do not forget to post the code to make effective and fast the answer.

Luigi
