---

```
sock.Put("-- BEGIN FRUIT LIST --\n");
```

```
for(int i = 0; i < FruitList.GetCount(); i++)  
sock.Put(FruitList[i] + '\n');
```

```
sock.Put("-- END FRUIT LIST --\n");
```

Each sock.Put would be a different connect/disconnect, not good.

Add all the char to a single string or buf with the \0 at the end and send that.  
One connect/disconnect
