Hi,

I am trying to connect to PostgreSQL and it does not really work.
For now I am just trying to run the example in reference section.

I have the DB installed and it is working I have a working schema on it.
However, when I am running the U++ example I am getting the following errors.

With the MSC10 Debug compiles perfectly but I am getting the pop up on the print-screen collage.

And with MSC10x64 I am getting the compilation errors bellow the pop on the print-screen collage.

Please any suggestions and help are greatly appreciated.

Thank you.

Best,
Georgi
