You are welcome.

This code is from the reference example SQLPostgreSQL (or something like this)

```
bool PostgreSQLTest::OpenDB()
{
    if(!m_session.Open("host=localhost dbname=test user=test password=test"))
    {
        Exclamation(Format("Error in open: %s", DeQtF(m_session.GetLastError())));
        return false;
    }
    m_array.SetSession(m_session);
}
```

You should be able to supply the correct host, and one of your actual db, user and password. For the port part, you should be able to add something like port=5433 to that string.

```
!m_session.Open("host=localhost port=5433 dbname=mydb user=myusername
password=mypassword"))
....
```

Let me know if it didn't work for you.
