lectus wrote on Sun, 09 December 2012 13:18Hi!
Attached is a simple Skylark app. I'm trying to understand why isn't the data getting inserted in the database.

Any idea?

Thanks
Hi lectus,

There is nothing wrong with your Skylark code, the problem is in your HTML In the template you mixed up and used id attribute instead of "name" for the form elements. It'll start to work if you just change it to: Name: <INPUT type="text" name="name">
    Phone: <INPUT type="text" name="phone">

Best regards,
Honza
