Hi Omari,

You came up with pretty much the same code as me. The only difference is that you included some unnecessary files, some of which are windows only so I can't even compile your package. You only need a few of them: `Types.h`, `LzFind.{c,h}`, `LzHash.h`, `LzmaDec.{c,h}` and `LzmaEnc.{c,h}`. That stuff is easy.

Implementing the nice zlib-like interface is harder. I can do it for decompression, but compression interface of lzma lacks the push data variant that is necessary for `Put()` interface we want. So far I couldn't come up with an elegant way to compress data incrementally.

Honza
