Hi Guys,
I have tried reading thread call 'Forlano tabs' but am still not clear on this point; please advise.

I have simple layout: splitter, TabCtrl at top; ArrayCtrl under it.
I have second layout: some buttons.
I have third layout: some edits.

I want to put the buttons layout on tab1 of the TabCtrl and the edits layout on tab2 of the TabCtrl. I know you can do this! But I can't get my head around where things get declared and where to 'Add'. Please point me in right direction.

BrianE
