Hello,

I can consistently crash the Sqlite3 interface with the program I hereby submit. It crashes in debug mode only. In Optimal mode the Select operation just fails.

When I look into the logfile there is a syntax error.

It seems some keywords are missing:

last bit:

Insert + Update + Select

```
insert into TEST(BD_KORTING) values (1)
update TEST set BD_AANTAL = 1, BD_BEDRAG = 345, BD_EXTRA_VAN = 2, BD_KORTING =
1, BD_BTW_BEDRAG = 345 where BD_ID = 2
BD_ID, BD_BEDRAG, BD_BTW_BEDRAG where BD_EXTRA_VAN = 2 and BD_KORTING = 1
ERROR near "BD_ID": syntax error(0): Preparing: BD_ID, BD_BEDRAG, BD_BTW_BEDRAG
where BD_EXTRA_VAN = 2 and BD_KORTING = 1
```

System: Windows XP SP3, MSVC10
