Hello,

I can consistently crash the Sqlite3 interface with the program I hereby submit. It crashes in debug mode only. In Optimal mode the Select operation just fails.

When I look into the logfile there is a syntax error.

It seems some keywords are missing:

last bit:

Insert + Update + Select

insert into TEST(BD\_KORTING) values (1)

update TEST set BD\_AANTAL = 1, BD\_BEDRAG = 345, BD\_EXTRA\_VAN = 2, BD\_KORTING = 1, BD\_BTW\_BEDRAG = 345 where BD\_ID = 2

BD\_ID, BD\_BEDRAG, BD\_BTW\_BEDRAG where BD\_EXTRA\_VAN = 2 and BD\_KORTING = 1

ERROR near "BD\_ID": syntax error(0): Preparing: BD\_ID, BD\_BEDRAG, BD\_BTW\_BEDRAG where BD\_EXTRA\_VAN = 2 and BD\_KORTING = 1

System: Windows XP SP3, MSVC10
