Subject: Re: Compile for Unix on Windows?!?!?!?
Posted by nlneilson on Wed, 12 Dec 2012 21:27:09 GMT

Lectus:
I don't think a dropbox is the answer.
I can click on Win, copy files or directories, and then paste them into the Ubuntu VM.

I need to access the files directly.
On the regular Ubuntu install it is just under host.

I will try installing the "VMWare Tools" again.

Even under options I enabled shared for C:

Another glitch is I cannot link up to an SD card.
I safely remove the USB and the SD card from Win.
Then when the VM is active I plug the USB in and the VM sees it.
That does not work for the SD card.
