When re installing "VMWare Tools" it started with Win95,98, Me then Win 2000 and later. I just let it keep running for Solaris and FreeBSD.

Will see if it makes a difference.

Another glitch is I can not display app icons on the desktop.
They show in the desktop directory but not on the desktop.

I installed gnome and can place the links on the top bar.

Just takes time to get things sorted out.
