Here   http://www.arilect.com/upp/forum/index.php?t=msg&th=234& amp; amp;start=0& we've seen how powerful is the singleton technique and how it is used in conjuction with SetDisplay to set the color of a cell/column.
The question now is: can the same technique be applied to change the font (to curier for example) of one column of the arrayctrl?

I do not need to change the font of the overall application, but only locally in the arrayctrl.

Luigi

Tehchnical note: It is not singleton what is powerful here. Display does not have to be singleton, often it is not.

And yes, you can of course use Display to change the font. Alternatively, you can use AttrText as Value to do the same.
