Novo,

Thank you; eventually it works. I prefer using the Package Organizer with specific compiler instruction for specific applications; I reckon I was mixing the OpenCL.lib for 64 with the MSC10 for Win32.

What surprises me is that sometimes Thelde is unable to interpret /I C:\Program Files\.. in a correct manner; I do not know why.

Also, the lack of file cl.hpp in the Nvidia SDK is a surprise.

Anyway it works and I shall practice OpenCL a bit; have you got an easy example to share? Something like multiplication of matrices?

Cheers,

Javier
