Subject: Use ctrls in another tab as detail problem

Is it possible to perform a JOIN with SqlArray on a SqlArray that's located in another tab?

I'm put a master SqlArray in one tab.

I'm trying to use 2 docedits to edit the data in the detail table.

But the docedits appear grayed.

Any ideas?

```
tab1.arrmaster.SetTable(MASTER);
 tab1.arrmaster.AddKey(ID);
 tab1.arrmaster.AddColumn(NAME, "Name").Edit(name);
 tab1.arrmaster.AddColumn(BIRTHDAY, "Birthday").Edit(birth);
 tab1.arrmaster.SetOrderBy(NAME);

 tab2.arrdetail.SetTable(DETAIL);
 tab2.arrdetail.AddKey(ID);
 tab2.arrdetail.Join(MASTER_ID, tab1.arrmaster);
 tab2.arrdetail.AddCtrl(DATA1, tab2.data1);
 tab2.arrdetail.AddCtrl(DATA2, tab2.data2);
```
