Hi,

```
#include <Core/Core.h>

using namespace Upp;

CONSOLE_APP_MAIN
{
    FindFile ff;

    if ( ff.Search ("c:\\*.*" ) )
        do
    {
        if ( ff.IsFile() )
        {
            LOG("File :" << ff.GetName());
        }
        else
        if ( ff.IsFolder() )
        {

            LOG("Dir :" << ff.GetPath());
        }
        else
        {
            LOG("?? :" << ff.GetPath());
        }
    }
    while ( ff.Next() );
}
```

Regards,
omari
