Hi,

When a table copied from excel, pasted into QtDesigner, the result is an image!

this is a bug or a desired behavior?

Note:

a solution to this problem consist of:

- 1 - copie the table from Excel
- 2 - past the table into Word
- 3 - copie the table from Word
- 4 - past the table into QtDesigner

the table then is pasted as rich text.

Regards,
omari
