Subject: Help for naming a package bringing some styles to Button class
Posted by Didier on Thu, 03 Jan 2013 19:04:57 GMT

Hi all,

I'm about to push in a package that adds some special button styles.Actually it is named :
ButtonStyles ... but I think the name may need some refactoring since it's a bit to general I think.

I'm open to all suggestions.

NB: the image shows only a few of the drawable styles.
I am currently coding a a demo application that will show most of the possibilities.
