Peter wrote on Wed, 09 January 2013 11:57: I have another question though. Is it possible to pass Http parameter of Skylark handler by reference to another function called from that handler and use it there?

...

Is the above safe/guaranteed to work? Can I access variables associated with http object from within wrapper?

Yes, it works, there is nothing special about the Http class. I have done this and never had any problem with it. The only thing you need to keep in mind is that you should not store this reference anywhere (e.g. no asynchronous calls that might take too long). Its content is reset after the handler function exits (or it might be destroyed completely, I'm not sure from the top of my head), so it would have quite fatal consequences

Best regards,
Honza
