Quote:Thanks. I'm trying something like this, but the layout is getting placed in the wrong place:  
<http://www46.zippyshare.com/v/86444831/file.html>

Please take a look!

I usually do it this way. see the attached zip. i design the tab layout in layout designer like you. but I create the template class in code instead of layout designer. this way i get to call the `CtrlLayout(*this)` in its contractor. and add the tabs to the window using this<<tab1<<tab2; and the rest all same like you. and it just works.
