But why doesn't this bug appear in the following simpler case?

```
SKYLARK(AAA, "aaa")
{
 http.SessionSet(".MY_SESSION_VARIABLE", Value(1));
 http.RenderResult("MyApp/aaa");
 http.ClearSession();
}

SKYLARK(BBB, "bbb")
{
 http.RenderResult("MyApp/bbb");
}
```

aaa.witz:

`<html><body>$set()<a href=$BBB>BBB</a></body></html>`

bbb.witz:

`<html><body>$set()</body></html>`

If I start from "aaa" and use link to go to "bbb", .MY_SESSION_VARIABLE is not listed on "bbb" anymore as intended.
What's the difference between this and previous case where moving from "bbb" to "ccc" didn't clear session?

Anyway, I hope the bug will be fixed soon (I can see its status is "approved", but it's still not fixed).

Best regards

Piotr
