slashupp wrote on Mon, 28 January 2013 07:48I saw this morning that there is a upp AND a theide package shown when I use apt. I have seen and used only the 'upp' option previously, and installed the 'theide'-option this morning - still get errors.

When I used only the 'upp'-option no executable is installed - there is no execuatble in that package.

The 'theide'-option does install an executable (the version is now correct at 5724-wheezy-amd64). The package upp contains only U++ sources, no executables. TheIDE itself is in package theide (or theide-nogtk for the NOGTK variant). There are also other packages: umk contains only the command-line builder umk and *-dbg packages contain debugging symbols for the executables in theide* and umk packages.

slashupp wrote on Mon, 28 January 2013 07:48Output from: dpkg -I | grep -w 'theide\|upp'
ii theide 5724-1~wheezy0 IDE (not only) for Ultimate++ framework
ii upp 5724-1~wheezy0 C++ library for cross-platform developmentThis seems correct.

slashupp wrote on Mon, 28 January 2013 07:48The errors I get when compiling:
(SNIP)
In file included from   /home/mais/.upp/_out/appdev/CtrlCore/GCC.Debug.Debug_Full.Gu
i.Mt.Shared.Sse2/$blitz.cpp:432:0:

redeclared as different kind of symbol
In file included from   /home/mais/.upp/_out/appdev/CtrlCore/GCC.Debug.Debug_Full.Gu
i.Mt.Shared.Sse2/$blitz.cpp:263:0:

...
(/SNIP)
I believe this is not really related to the packaging. Can you answer the questions I asked before:Quote:What is your setting regarding source code updates? Are you using the svn or code from upp deb package? Did you try "Rebuild all"?If you are not sure about the settings, just post the configuration from the file $(HOME)/.upp/theide/updates.xml. Also, what directories is your assembly pointing to? You can find that in $(HOME)/.upp/theide/<assembly_name>.var.
