#include "Tranmission.h"

```
//#define IMAGEFILE <Tranmission/Tranmission.iml>  
//#include <Draw/iml_source.h>
```

main.obj : error LNK2019: unresolved external symbol "class Image const & __cdecl logo2(void)"
(?logo2@@YAABVImage@
@XZ) referenced in function "public: __thiscall transport::transport(void)" (??0transport@@QAE@XZ)

The problem is caused by those two lines being commented out - those lines are needed to create
"Image constants" - those symbols that linker lists as unresolved.
