fudadmin wrote on Fri, 26 May 2006 09:53 You can download my new version of ScrollArea.
Nothing special but might be sometimes useful...
Unzip "here" into your packages dir.

Edit: this version with scrollbars.

Hi Aris,

I'm using your scrollarea. It is very useful in this moment because I'm trying to simulate a sort of arrayctrl where each row contains different widgets that can be manipulated easily.
Because I do not need a horizontal scroll I wonder if can be removed the horizontal bar.

Luigi
