Ooops... Didn't pay attention to this...

Does this mean that it's normal that it does not work in the top-level menu ?

My problem is that I need just one level (that is often the case with a popup), so I have only a top-level menu...

I'm a little confused... How to do to have no menu bar, and only a one-level popup menu ? What is the difference between top-level menu and submenus ?
