Here http://www.vegachess.com/en/vega5rr.htm , at the middle of the page, you can see your scroll area in action

Luigi

Which one?

It is the window "Modify Colors". In the worse situation I needed 500 pair of buttons and and relative labels and icons (they are simple icon in a label and not option image button). Perhaps the arrayctrl is enough to do it... knowing how to use it... but I found easier to attach them to the scrolling area. Each row is widget class.
