Seems you're still missing some of the development packages. The complete list of the necessary packages should be this:

gtk2-devel
pango-devel
atk-devel
cairo-devel
xorg-x11-devel
freetype2-devel
libexpat-devel

Note that some of the names might be slightly different, as this list was taken from OpenSUSE. Also, it is pretty old, so some things might have changed since I never used any of the RPM based distros, so I'm not really well informed about all this :-/
