dolik.rce wrote on Sun, 17 March 2013 20:20Seems you're still missing some of the development packages. The complete list of the necessary packages should be this:

gtk2-devel pango-devel atk-devel cairo-devel xorg-x11-devel freetype2-devel libexpat-devel

Note that some of the names might be slightly different, as this list was taken from OpenSUSE. Also, it is pretty old, so some things might have changed since I never used any of the RPM based distros, so I'm not really well informed about all this :-/

Honza

Okay, 'im trying to download it right now

Thank you!
